Cherf Leg Holder

The Cherf Leg Holder is designed to support the lower extremity for prepping before knee or hip surgery. This is useful for all lower extremity procedures and is particularly helpful for supporting the leg with the patient positioned in the lateral position. By holding the foot/ankle in an externally rotated position, the knee can be locked into extension which helps eliminate the need for manual support.

The leg holder may also be used to support the limb for surgical patients in the supine position such as for knee and foot/ankle procedures.

Designed by
J. Cherf, M.D.

Product No: 2270

[Replacement pads available]

*Supports the lower extremity for
prepping before hip or knee surgery*
