

# Sanders Extremity Positioning Tubes

*Designed to support the knee and ankle during lower extremity surgery*

The 6" tube lifts the knee off the operating table and allows for approximately 30° of knee flexion. Very useful for closure of total knee incisions, supporting fractures of the distal femur, and tibia plateau fractures. The 4" tube elevates the foot and ankle for ankle fracture surgery. The tubes are made of aluminum, allowing them to be autoclaved. They help eliminate the need for rolled sheet bolsters.

*Designed by*  
Richard A. Sanders, MD
