Minimal Incision Total Hip Retractors

Designed By Wayne M. Goldstein, MD

Instruments designed for Minimal Incision Total Hip Surgery using the standard posterior lateral approach

Blunt Right Angle Posterior Capsular Retractor

The right-angle capsular retractors help retract and provide additional exposure around the acetabulum—either posterior or superior.

Right Angle Posterior Capsular Retractor

Using a finger, the underside of the gluteus medius tendon can be palpated and the curved end of this Hibbs-style retractor can be placed and pulled anteriorly. The right angle end of the retractor can be used later in a similar fashion to the Blunt Right Angle Retractor described above.

Bent Hohmann Retractor for Gluteus Medius

For use in femoral exposure, the Bent Hohmann Retractor can be placed anterior to the capsule, around the greater trochanter, to rest on the lateral cortex of the femur, allowing access to the proximal femur.

90° Soft Tissue Retractor
Helps to provide exposure and protect the nerve structures posteriorly during initial exposure of the acetabular capsule.

Product No:
7150
Overall Length: 8"
Blade Width: 25 mm
Blade Depth: 3.25"

Cobra Retractor with Hand Rest
The pointed cobra retractor with hand rest is placed anteriorly to help retract and expose.

Product No:
7130
Overall Length: 10.25"
Blade Width at Widest: 32 mm

Superior Capsular Retractor
Designed to be placed over the superior capsule.

Product No:
7140
Overall Length: 9.75"
Blade Width at Widest: 19 mm

Posterior-Inferior Retractors
The posterior-inferior retractor is placed with the point at 6 o’clock and the retractor’s axilla resting on the ischium. The remaining blade of this retractor is used to retract the remaining capsule from the posterior lip of the acetabulum.

Product No’s:
7625-01 [Right]
Overall Length: 10.75"
Handle-to-Bend Length: 5.5"
7625-02 [Left]
Overall Length: 10.75"
Handle-to-Bend Length: 5.5"
