1. Versatile set of fracture reduction clamps, each with a specific tine design that allows for appropriate vector placement so that anatomic reduction can be obtained in a number of different types of fractures.

- **Pointed Fracture Reduction Clamps**
  - Designed by Reza Firoozabadi, MD MA
  - 1.9 mm tines allow for a snug fit in 2 mm drill holes
  - Tines angled to prevent clamp “slippage” with compression
  - Straight tines can be placed deep within bone which allows for far cortex compression
  - Example applications: any transverse fracture (straight-straight clamp), both bone forearm fractures, olecranon fractures, medial malleolus fractures, and many more
  - Speed Lock Style: Extra-long spin down allows for increased range of clamp use, and open-topped joint rotates to allow for increased range of opening, and also allows for quick release

**Tine Configurations**

- Small With Speed Lock
- Medium With Speed Lock
- Small With Ratchet
