Universal Screw Removal Instrument System

Designed to remove solid and cannulated screws during trauma, hip, knee and arthroscopy procedures

Used for removal of:
- Stripped hex screws
- Buried screws
- Partial screws with broken screw heads

Screw Extractors
Unique thread design accommodates removal of stripped screws. The instrument "looks" into the screw head and allows removal once engaged. Designed to be used in a counter-clockwise direction.

Trophines
Designed to fit over submerged screws for extraction with minimal bone loss. Extraction is enhanced by the unique tooth design. Designed to be used in a counter-clockwise direction.

Universal Extractor
Designed to remove screws with heads partially or completely missing. The cone shaped head fully engages the remaining screw and optimizes the force needed for removal. The bolt is disposable and locks into place using a unique thread design. Designed to be used in a counter-clockwise direction.

Hex Drivers
Available in all standard hex sizes. Also offered in a cannulated shaft version for easier removal of buried screws.

Screwdrivers
Standard cruciform screwdrivers in large, small, and mini, and single slot.

Universal Instrument Handle
The single handle allows the surgeon to decide which direction is most efficient and comfortable. The quick-connect release mechanism allows for quick interoperative exchange.

Universal Extractor
The drive end (A/O) is designed for easy and quick engagement with the universal instrument handle.

Push button Quick-connect release mechanism

Ergonomic, modular handle with two connection points allows for both straight and T handle orientations

Pick
Used to remove fragments and bone or tissue from screw head.

Cannulated Drive Extension
Used when a longer instrument shaft is desired.
