

Universal Screw Removal Instrument System

Designed to remove solid and cannulated screws during trauma, hip, knee and arthroscopy procedures

Used for removal of:

- Stripped hex screws
- Buried screws
- Partial screws with broken screw heads

The drive end (A/O) is designed for easy and quick engagement with the universal instrument handle.

Screw Extractors

Unique thread design accommodates removal of stripped screws. The instrument "locks" into the screw head and allows removal once engaged. **Designed to be used in a counter-clockwise direction.**

Trephines

Designed to fit over submerged screws for extraction with minimal bone loss. Extraction is enhanced by the unique tooth design. **Designed to be used in a counter-clockwise direction.**

Universal Extractor

Designed to remove screws with heads partially or completely missing. The cone shaped head fully engages the remaining screw and optimizes the force needed for removal. The bolt is disposable and locks into place using a unique thread design. **Designed to be used in a counter-clockwise direction.**

Hex Drivers

Available in all standard hex sizes. Also offered in a cannulated shaft version for easier removal of buried screws.

Screwdrivers

Standard cruciform screwdrivers in large, small, and mini, and single slot.

Cannulated Drive Extension

Used when a longer instrument shaft is desired.

Universal Instrument Handle

The single handle allows the surgeon to decide which direction is most efficient and comfortable. The quick-connect release mechanism allows for quick interoperative exchange.

Pick

Used to remove fragments and bone or tissue from screw head.

Product No's:	
S0010-00	Complete System with Case
S0113	Universal Instrument Handle
