Stulberg Hip Positioner

Designed by S. David Stulberg, MD

Provides stable positioning of a patient during hip surgery

The Stulberg Hip Positioner is used for stable positioning of a patient during total hip and revision surgery. It is designed to attach directly to the operating table utilizing the existing table adapters.

The upright pads are made of semi-dense foam to help prevent pressure points and are sealed with a washable coating. The coating also helps to lessen the possibility of skin breakdown.

The hip positioner consists of: One 10" post assembly with double pads and one 6" post assembly with a single pad, two 2" spacers, one 4" knob, one 6" knob, and two table attachments.

The spacers and longer knobs are supplied for use with larger patients: use one spacer with the 4" knob, or combine the two spacers to use with the 6" knob.

The pad assembly can be adjusted for additional height and width. The upright posts are modular. The complete unit is radiolucent, and all parts are autoclavable except for the washable foam pads and storage case.

PRODUCT NO'S:	
4150-00	[Set] *Consists of: Case, one 10" post assembly with double pads, one 6" post assembly with a single pad, two 2" spacers, one 4" knob, one 6" knob, and two table attachments.*

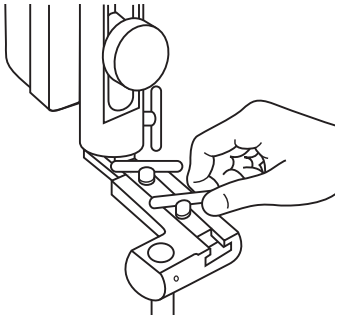
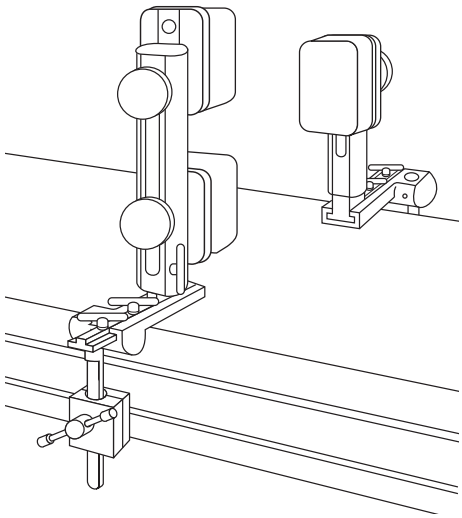
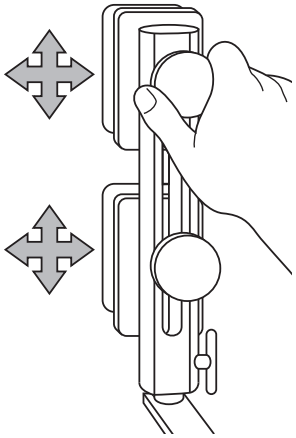
The upright assembly can be rotated and locked in place.



The upright assembly adjusts by a sliding track to accommodate various sized patients. It is locked in the sliding track by tightening one or two locking bolts.

Stulberg Hip Positioner attaches to table via table clamps.





The pads can be adjusted for height and width.

Spacer assembly.
